

Student Name: Anikait

Class – 11th

School Name: Army Goodwill School Murgund.

This story is about a young kind boy, Anikait, who once wandered aimlessly through his school days, uncertain about his passion and abilities. Being shamed and labelled as someone who was ‘good at nothing’, leaving him disheartened and discouraged!

But one-day luck seemed to be on his side when his unspoken passion for robotics was introduced to him during Innovation Club sessions, a space brimming with innovation, tools, and mentors to encourage students to explore technology and innovation. The atmosphere of creativity and the encouragement of experimentation reignited a spark within him. Determined to prove his detractors wrong, he embraced the challenges offered by the Innovation Club activities. With each passing day, his confidence grew and he became enduring. He immersed himself in coding, electronics and problem-solving and started to excel in his work, surprising himself and those around him.

Guided by his empathy and a desire to create something impactful, Anikait collaborated with mentors and other students. A boy who once started making simple projects like ‘smart dustbin’ is now leading the team involved in making a mindful project of ‘solar-powered irrigation system for local farmers’.

As Anikait showed his projects at school exhibitions and innovation fairs, his transformation from an aimless student to an achiever became apparent. His ideas, creativity and projects not only won accolades but also drew admiration from his peers and teachers. The same individuals who once ridiculed him are now getting inspired by his perseverance and achievements.
